
YOUR ENERGY EFFICIENCY REBATES

The Government of Alberta is providing rebates to help make our homes more efficient and save us money. We at C3 (a not-for-profit organization) are designing and delivering these programs to Albertans.

INSULATION

CEILING INSULATION

A minimum of 20% of the total ceiling area must be insulated to qualify. When the roof has more than one type (e.g. attic, cathedral ceiling, flat roof), all applicable rebates are pro-rated based on the ceiling area that is insulated. The maximum grant for any combination of attic, cathedral ceiling and flat roof is \$562.50. Rebates listed reflect 100% of the ceiling area being of one roof type.

FINISHING POINT	STARTING POINT		
	≤ R-12	> R-12 TO R-25	> R-25 TO R-35
Attic – total minimum insulation value of RSI 7 (R-40)	\$375.00	\$187.50	-
Attic – total minimum insulation value of RSI 8.8 (R-50)	\$562.50	\$281.25	\$93.75
Flat roof and/or cathedral ceiling – total minimum insulation value of RSI 5 (R-28)	\$562.50	\$187.50	-

EXTERIOR WALL INSULATION

A minimum of 20% of the total exterior wall area must be insulated to qualify. The rebate is based on the percentage of wall area that is insulated and does not include walls between individual units. See "Important Note about Semi-Detached and Row Houses."

% AREA	MINIMUM ADDITIONAL INSULATION	
	R-3.8 TO R-9	> R-9
20	\$168.75	\$281.25
40	\$337.50	\$562.50
60	\$506.25	\$843.75
80	\$675.00	\$1,125.00
100	\$843.75	\$1,406.25

EXPOSED FLOOR INSULATION

Overhangs and floors above an unheated space, excluding crawl spaces. Insulate your entire exposed floor and increase its insulation value by a minimum of RSI 3.5 (R-20). A minimum floor area of 14 square metres (150 square feet) must be insulated to qualify.

% AREA	R-20
100	\$142.50

BASEMENT INSULATION

When both a basement and crawl space are present, all applicable rebates are pro-rated to a maximum of \$937.50 based on the total wall area that is insulated. A minimum of 20% of the foundation's wall area (including basement and crawl space walls, when applicable) must be insulated to qualify. The rebate is based on the percentage of wall area that is insulated and does not include walls between individual dwelling units. See "Important Note about Semi-Detached and Row Houses."

% AREA	R-10 TO R-23	> R-23
20	\$93.75	\$187.50
40	\$187.50	\$375.00
60	\$281.25	\$562.50
80	\$375.00	\$750.00
100	\$468.75	\$937.50

BASEMENT HEADER INSULATION

Seal and insulate your entire basement header area, increasing its insulation value by a minimum of RSI 3.5 (R-20).

% AREA	R-20
100	\$93.75

CRAWL SPACE INSULATION

When both a basement and crawl space are present, all applicable rebates are pro-rated to a maximum of \$937.50 based on the total wall area that is insulated.

NOTES	R-10 TO R-23	> R-23
	Insulate 100% of the crawl space's total exterior wall area, including the header area. See "Important Note about Semi-Detached and Row Houses."	\$375.00
Insulate 100% of the floor above the crawl space to increase its insulation value by a minimum of RSI 4.2 (R-24).	-	\$187.50

The paper used for this brochure is made from 100% post-consumer, FSC certified material and was manufactured in a certified facility that uses 100% renewable energy.

C3 - Energy. Ideas. Change.

HOME EVALUATION REQUIRED

When you have an energy evaluation performed on your home, no application is necessary to be eligible for the provincial rebates listed below. Home energy evaluations are done through the federal ecoENERGY Retrofit Program and while federal grants are no longer available, the process still provides valuable information about the efficiency of your home and can give you access to the following provincial rebates:

QUALIFICATION	AMOUNT	APPLICATION REQUIREMENTS*
 HOME ENERGY EVALUATION Pre-retrofit evaluation	\$ 100	No application is necessary. Rebate is automatically processed upon completion of a home evaluation.
Post-retrofit evaluation	\$ 100	
 DOMESTIC HOT WATER** Instantaneous (tankless), gas-fired water heater with an energy factor of 0.82 or higher	\$ 250	No application is necessary if you upgrade your domestic hot water as part of a home energy evaluation process. Otherwise an application is required.
Instantaneous (tankless), gas-fired water heater with an energy factor of 0.90 or higher	\$ 300	
Gas-storage water heater with a thermal efficiency of 90% or higher	\$ 300	
 INSULATION See below and reverse	UP TO \$ 3,150	Participation in the home energy evaluation process is required. No application is necessary as your rebate will be automatically processed.

** Note: A home energy evaluation is not required to receive the domestic hot water rebate; however, without an evaluation a separate rebate application is necessary.

INSULATION

The information contained within the following insulation table is based upon the requirements listed by Natural Resources Canada (NRCan) in its Grant Table for ecoENERGY Retrofit – Homes. The values indicate the provincial rebate amount: 75% of what the federal insulation grant would have been.

IMPORTANT NOTE ABOUT SEMI-DETACHED AND ROW HOUSES: In the case of a semi-detached or row house that is an end unit, the rebate amount for the insulation of exterior walls, basement or crawl space walls is 75% of the amounts shown. In the case of a row house that is a middle unit, the rebate amount is 50% of the amounts shown.

HOME EVALUATION NOT REQUIRED

Apply to C3 to receive the following rebates:

QUALIFICATION	AMOUNT	APPLICATION REQUIREMENTS*
 FURNACE/ BOILER		<p>* Application Requirements and Terms and Conditions available on our website. Online applications are processed faster, visit www.climatechangecentral.com. For a paper application call 1 888 537 7202.</p>
Gas furnace with an annual fuel utilization efficiency (AFUE) of 92% or better	\$400	
Zero-clearance gas furnace with an AFUE of 90% or better (mobile homes only)	\$400	
Gas furnace with an AFUE of 92% or better and a DC variable-speed motor	\$500	
Oil boiler with an AFUE of 85% or better	\$600	
Condensing gas boiler with an AFUE of 90% or better	\$600	
 DOMESTIC HOT WATER		<p>Must be a replacement unit. Purchase and installation must take place in Alberta. A copy of the receipt must indicate payment method (in full), the applicant's name, installation address and purchase date, along with the manufacturer and model of the furnace/boiler or hot water system.</p>
Instantaneous (tankless), gas-fired water heater with an energy factor of 0.82 or higher	\$250	
Instantaneous (tankless), gas-fired water heater with an energy factor of 0.90 or higher	\$300	
Gas-storage water heater with a thermal efficiency of 90% or higher	\$300	
 NEW HOME		<p>Applicants must receive an EnerGuide file number, from either their builder or a Natural Resources Canada licensed service organization, prior to submitting their application.</p>
New home receiving an EnerGuide rating of 80 or 81	\$1,500	
New home receiving an EnerGuide rating of 82 to 85	\$3,000	
New home that meets or exceeds EnerGuide 86	\$10,000
